Regarding XM Instant Traffic & Weather, We urge the FCC to reject the NAB petition 04-160!

My husband and I drive an 18-wheeler back and forth across the United States, we greatly enjoy and appreciate XM Radio. The virtually commercial-free radio keep us entertained over the many miles. But what goes beyond enjoyment of the news and music is the ability to know what the weather is doing in our path, and the safety factor of knowing what the traffic is ahead of us so that we can re-route our truck.

Not only does it save us time, but removes at least THIS truck from adding to the traffic problems!

Please do not let the National Association of Broadcasters dictate what we, the loyal XM Radio listeners, are allowed to hear. We pay for these services because they are superior to what the NAB offers. Thy NAB could more easily win us back to their stations by improving their services, rather than trying to "kill" their competition by proposing unfair changes, thereby blocking out part of the programming of their competitors.
